

# Advanced Soaring Made Easy

2<sup>nd</sup> Edition

## Table of Contents

Preface to second edition	2
About the Author	3
Foreword by Ingo Renner	4
Foreword by Michael Sommer	5
Content at a glance	6-7
To my family / The use of icons	8

### 1. Training in the vicinity of the home airfield

1.1	Introduction	10
1.2	Thermal recognition & thermal detection	11
1.3	Centring a thermal	12
1.4	Using other gliders as lift indicators	16
1.5	Thermalling at a steady rate of climb	18
1.6	Audio variometers	19
1.7	Thermalling speeds	20
1.8	The effect of different wing loadings	22
1.9	Angle of bank	22
1.10	Drag	26
1.11	Practical hints	29
1.12	Problems arising while thermalling steeply	30
1.13	Avoiding sink after releasing	31
1.14	Structure of thermals	32
1.15	Thermal formation and thermal behaviour on a calm day	35
1.16	Finding thermals on blue days	36
1.17	Efficient centring of thermals in blue conditions	38
1.18	Thermal behaviour on windy days	38
1.19	Lift towards the end of the day	40
1.20	Lift under cumulus clouds	42
1.21	Finding the core under larger cumulus clouds	43
1.22	Spacing of thermals	45
1.23	Tactics just before and after launching	46
1.24	Over-development and cycling	47
1.25	Dissipating cumulus clouds	47
1.26	The self-stoking effect of cumulus clouds	48
1.27	Dust devils	48
1.28	The effect of a strong wind on thermals	51
1.29	Thermal re-centring in windy conditions	51
1.30	The importance of flying accurately	52
1.31	Other sources of energy	53

### 2. Weather and Gliding

2.1	Introduction	56
2.2	The sun hard at work	57
2.3	The upper air temperature profile	58
2.4	The importance of inversions	59

2.5	The Dry Adiabatic Lapse Rate (DALR)	59
2.6	The Environmental Lapse Rate (ELR)	59
2.7	The role of the dew point	63
2.8	Prediction of thunderstorms	65
2.9	Over-development of cumulus clouds	66
2.10	Strength of thermal activity	67
2.11	Highs, Lows, troughs and ridges	69
2.12	Weather patterns in Australia	74
2.13	Soaring conditions in Central Europe	76
2.14	Sea breeze fronts	85
2.15	A clue from the clouds above	92
2.16	The "skew T – Log P" diagram.	95
2,17	The Tephigram	96

### 3. Preparing for cross-country flying

3.1	Getting ready for road retrieves	100
3.2	A partnership with your crew	100
3.3	Preparing for longer flights	101
3.4	What is a reasonable task for the day ahead?	108
3.5	The point of no return	110
3.6	What did I learn today?	110
3.7	Checklist for taking a glider away	113

### 4. Extended local soaring

4.1	Introduction	114
4.2	Stepping out of your comfort zone	114
4.3	Dealing with fear	115
4.4	Training	116
4.5	Getting help from a coach	118
4.6	Lead & follow coaching	120
4.7	Team flying	123
4.8	Flying with water ballast	125
4.9	Looking for lift when low	128
4.10	Wind shear	129
4.11	Influence of airflow above the convection level	131
4.12	Operation in Cumulonimbus/Thunderstorm conditions	133
4.13	Drift	135
4.14	Navigation with modern instruments	136
4.15	Certificates and Badges	138

### 5. Advanced cross-country flying

5.1	Introduction	144
5.2	Getting the speed up	144
5.2.1	Are we using too many thermals?	145
5.2.2	Are we hanging on to a thermal for too long?	145
5.2.3	Are we centring a thermal quickly enough?	145
5.2.4	Are we thermalling efficiently enough?	146
5.2.5	Yawstring corrections	147
5.2.6	Is our meteorological navigation up to scratch?	148
5.2.7	Is our thermal selection good enough?	148
5.3	The effect of detours	149
5.4	Speed to fly	152
5.4.1	Maximising glide distance	152
5.4.2	Maximising average cross-country speed	153
5.5	How important is cruising at optimum	

speed?	156
5.6 Flying tactics on track and height bands	157
5.7 Thermal streets	160
5.8 Dolphin flying	164
5.9 Haze domes	165
5.10 Mountain thermals	165
5.10.1 Ground inversions in mountainous terrain	167
5.11 Exiting a thermal	168
5.12 Final glide	169
5.13 Low level finishes	170
5.14 Flight analysis	172

## 6 Winning the mental game

6.1 Planning	180
6.2 Positive thinking	182
6.3 Making decisions	183
6.4 Thinking ahead	186
6.5 Concentration & Relaxation	187
6.6 Learn how to learn	190
6.7 Confidence and over-confidence	190
6.8 Mental rehearsals	191
6.9 Commitment	192
6.10 Setting a goal and achieving it	193
6.11 Our mood and its effect on performance	194
6.12 Formula for success	197
6.13 Analysing your flight	197
6.14 Learning from the experts	198
6.15 Believe in your ability to succeed	198

## 7 Flying competitively

7.1 Choosing a competition class	202
7.2 Preparing for your first competition	204
7.3 Getting to know the contest area	206
7.4 Starting a race	206
7.5 Out on a competition task	208
7.6 Turning points	211
7.7 The problem of stress in competition	212
7.8 Shaving off the seconds	215
7.9 Risk management	215
7.10 Staying fit for the duration of the contest	217
7.11 Is the mature glider pilot disadvantaged?	218

## 8 Let's get technical

8.1 Getting the most out of a glider	222
8.2 Variometers and their limitations	223
8.3 Getting the variometer set-up right	227
8.4 Optimising your sailplane's Centre of Gravity	229
8.5 Why do winglets work?	230
8.6 Flaps	232

## 9 Outlandings

9.1 Introduction	240
9.2 Misleading altimeter	240
9.3 Determining wind direction	241
9.4 Circuit planning	243
9.5 Field selection	244
9.6 Dos and Don'ts	247
9.7 Aero-tow retrieves	249
9.8 Long-term benefits	250

9.9 Outlanding training and motor gliders	250
---	-----

## 10 Safety first

10.1 Introduction	254
10.2 Thermalling etiquette and thermal approach procedures	254
10.3 Effective scanning	255
10.3.1 Putting the focus on vision	256
10.3.2 Good lookout is no accident	258
10.4 Flarm	263
10.5 Are we fit for flying?	264
10.6 Using the radio to enhance safety	266
10.7 Radio procedures	267
10.8 Open class manoeuvrability	269
10.9 Gliders with retractable engines	270
10.9.1 Take-offs in self launching gliders	271

## 11 Ridge lift and slope soaring

11.1 Introduction	274
11.2 Theoretical fundamentals	274
11.3 Conditions affecting ridge soaring	276
11.4 Obstacles upwind of the ridge	278
11.5 Ridge lift and thermals	280
11.6 Katabatic and anabatic winds	281
11.7 Flying tactics	283
11.8 Ridge soaring rules	284
11.9 Flying well above ridge top level	284
11.10 Dangers	285

## 12 Wave Lift

12.1 Introduction	290
12.2 Topography	292
12.3 Lee wave airflow and terminology	292
12.4 Meteorological conditions	293
12.5 Wavelength	294
12.6 Amplitude	295
12.7 Moisture	296
12.8 Dangers	297
12.8.1 Limitations of the human body	297
12.8.2 Aircraft limitations	301
12.9 Cloud formation	303
12.10 The practical aspects of wave flying	304
12.11 The effects of crosswind on the speed above ground	308
12.12 Safety in wave	309
12.13 Shear wave	311
12.14 Thermal wave	311
12.15 Bands of cumulus wave	316
12.16 Morning Glory	317
12.17 Dynamic soaring	323

Winners in society	326
Where to go from here	326
Acknowledgements	329
Table of contents	333
Order form	335
