

Contents

Foreword	Pg.5
Aknowledgements	Pg.7
Contents	Pg.9-14
Chapter 1- Glider design and drafting	Pg.15
1.1 Planning	Pg.17
1.2 Lofting of the glider design	Pg.17
1.3 Ergonomics	Pg.19
1.4 Components	Pg.20
1.5 Safety features	Pg.20
1.6 Drawing list	Pg.21
1.7 Calculation list	Pg.23
1.8 Instruments	Pg.24
1.9 Glider specifications	Pg.24
Bibliography	Pg.25
Figures and graphs	Pg.26-35
Chapter 2 – Materials and their properties	Pg.37
2.1 Introduction	Pg.39
2.2 Wood	Pg.39
2.3 Aluminium and Magnesium	Pg.40
2.4 Steel	Pg.41
2.5 Plastics	Pg.42
2.51 Paintings	Pg.42
2.52 Rubber	Pg.43
2.53 Glues	Pg.43
2.6 Composite types	Pg.44
2.7 Laminae properties	Pg.45
2.8 Composite technology	Pg.47
2.9 The matrixes	Pg.48
2.10 Sandwich design	Pg.49
2.11 Allowable stresses	Pg.51
2.12 Materials used for sandwich construction	Pg.53
2.13 Fatigue consideration	Pg.55
Bibliography	Pg.55
Figures and graphs	Pg.56-58
Chapter 3 - Flight Mechanics	Pg.59
3.1 Basic formulae	Pg.61
3.2 Spiral flight	Pg.63
3.3 Climbing performance	Pg.64
3.4 The turn	Pg.65
3.5 The glider rotation speeds : p,q,r.	Pg.67
3.6 The quick oscillations	Pg.68
3.6 a The quick oscillations in yaw	Pg.70
3.6 b The quick oscillations in pitch	Pg.73

3.6 c The quick roll movements	Pg.74
3.8 The slow oscillations	Pg.77
3.9 The phugoid	Pg.79
3.10 The aerodynamic coefficients	Pg.80
Bibliography	Pg.83
Figures and graphs	Pg.84-90
Chapter 4 - Glider Aerodynamics	Pg.95
4.1 Introduction	Pg.97
4.2 The camber or wing mean line curvature	Pg.97
4.3 The aerodynamic zero and wing twist	Pg.98
4.4 Flaps	Pg.99
4.5 Wing section pressure center	Pg.99
4.6 The wing angle of attack	Pg.100
4.7 The parasite drag	Pg.101
4.8 Wing-fuselage interference drag	Pg.103
4.9 The empennages	Pg.104
4.10 The wing planform	Pg.104
4.11 The rectangular wing	Pg.105
4.12 The trapezoidal wing	Pg.106
4.13 The wing with elliptic planform	Pg.106
4.14 The wing tips	Pg.107
4.15 The winglets	Pg.107
4.16 The downwash	Pg.108
4.17 Aspect ratio and rate of roll sensitivity	Pg.108
4.18 The glider polar in the vertical plan	Pg.109
4.19 The glider polar in circling flight	Pg.115
4.20 Surface finish	Pg.117
4.21 The flying wing	Pg.117
4.22 The V tail	Pg.117
Conclusion	Pg.118
Bibliography	Pg.120
Figures and graphs	Pg.121-135
Chapter 5 – Glider stability. The physical meaning	Pg.137
5.1 Trim and stability	Pg.139
5.2 The glider with a poor static margin	Pg.139
5.3 Yaw stability	Pg.139
5.4 The Dutch roll	Pg.139
5.5 Spiral instability	Pg.140
5.6 The dihedral	Pg.140
5.7 The adverse yaw	Pg.141
5.8 The spin	Pg.141
5.9 The deep stall	Pg.142
5.10 Controllability and stability	Pg.142
5.11 Static and dynamic stability	Pg.142
5.12 Neutral condition	Pg.143
5.13 Trim and longitudinal equilibrium	Pg.143
5.14 Stick fixed and free. Forces per “g”	Pg.144

5.15 Neutral point	Pg.144
5.16 The static margin	Pg.145
Bibliography	Pg.145
Figures and graphs	Pg.146-149
Chapter 6 – Glider stability calculation.	Pg.151
6.1 Introduction	Pg.153
6.2 The symbols	Pg.153
6.3 Glider C.G.	Pg.154
6.4 Geometric and aerodynamic chord	Pg.156
6.5 Forces per “g”.The glider handling qualities	Pg.156
6.6 Longitudinal static stability	Pg.159
6.7 Equilibrium	Pg.160
6.8 Glider behaviour during the manoeuvre	Pg.162
6.9 Wing and tail setting	Pg.163
6.10 Controls design	Pg.164
6.11 Design and balance of the control surfaces	Pg.165
6.12 Aileron design	Pg.167
6.13 The static directional stability	Pg.168
Conclusion	Pg.169
Bibliography	Pg.169
Figures and graphs	Pg.170-176
Chapter 7 - Glider dynamic stability calculations	Pg.177
7.1 Introduction	Pg. 179
7.2 Dynamic flying qualities	Pg. 181
7.3 The estimate of the dynamic stability characteristics	Pg. 183
7.4 The estimate of the aerodynamic derivative	Pg. 188
7.5 The dynamic stability characteristics	Pg. 191
7.6 Longitudinal motion.Period and damping	Pg. 192
7.7 Lateral dynamic stability	Pg. 193
7.8 Dynamic stability calculation summary	Pg. 193
Bibliography	Pg. 194
Figures and graphs	Pg. 194 - 195
Chapter 8 - Airworthiness Requirements	Pg. 199
8.1 Introduction	Pg. 201
8.2 RAI rules	Pg. 202
8.3 The flight conditions	Pg. 203
8.4 The BCAR-E rules	Pg. 205
8.5 The relevant sections of BCAR –E rules	Pg. 205
8.6 The OSTIV rules	Pg. 208
8.7 The JAR 22 and the new CS 22 rules	Pg. 210
8.8 Tail Loads	Pg. 211
Conclusion	Pg. 211
Bibliography	Pg. 211
Drawings	Pg. 212-213

Chapter 9 - Structural Loads	Pg. 215
9.1 Introduction	Pg. 217
9.2 Wing aerodynamic loads	Pg. 217
9.3 Manoeuvre envelope	Pg. 217
9.4 Gust envelope	Pg. 218
9.5 Towing speed	Pg. 219
9.6 Lift distribution	Pg. 219
9.7 Mass forces determination	Pg. 221
9.8 Wing torsional moments	Pg. 221
9.9 Aileron loads	Pg. 223
9.10 Airbrakes loads	Pg. 224
9.11 Tail loads	Pg. 224
9.12 The pressure center on the horizontal tail	Pg. 227
9.13 Vertical tail loads	Pg. 228
9.14 Fuselage loads	Pg. 228
9.15 Landing loads	Pg. 230
9.15 Wing fittings loads	Pg. 232
Bibliography	Pg. 233
Drawings	Pg. 234 - 240
Chapter 10 – Aeroelastic vibrations	Pg. 241
10.1 Introduction	Pg. 243
10.2 The glider motions	Pg. 245
10.3 The control reversal	Pg. 246
10.4 The gust response	Pg. 247
10.5 Balancing the control surfaces	Pg. 247
10.6 The preliminary procedure to follow	Pg. 248
10.7 Aeroelasticity in sailplane design	Pg. 250
10.8 Aeroelastic problems	Pg. 251
10.9 The mechanism of flutter	Pg. 251
10.10 Flutter of a typical wing section	Pg. 252
10.11 Certification process for flutter prevention	Pg. 252
10.12 The ground vibration test	Pg. 253
10.13 The symmetrical modes	Pg. 254
10.14 Numerical modelling	Pg. 255
10.15 Aspects for sailplane design	Pg. 256
Conclusion	Pg. 256
Bibliography	Pg. 257
Figures and graphs	Pg. 258-270
Chapter 11 - Static tests	Pg. 283
11.1 Introduction	Pg. 285
11.2 The static test	Pg. 285
11.3 Wing tests	Pg. 285
11.4 Fuselage and horizontal tail test	Pg. 288
11.5 Testing for flutter calculations	Pg. 289
11.6 Dynamic tests	Pg. 290
11.7 Equipment for testing	Pg. 290
11.8 Ground measurements	Pg. 291

11.9 Ground vibration test	Pg. 291
11.10 Certification test	Pg. 291
Figures and graphs	Pg. 294-296

Chapter 12 - Flight Tests	Pg. 297
12.1 Introduction	Pg. 299
12.2 Ground measurements	Pg. 299
12.3 Weight and C.G. position	Pg. 301
12.4 Glider identification	Pg. 301
12.5 The first flights	Pg. 302
12.6 Longitudinal stability	Pg. 305
12.61 Static longitudinal stability	Pg. 305
12.62 Static longitudinal stability stick, fixed	Pg. 305
12.63 Static longitudinal stability, stick free	Pg. 305
12.7 The longitudinal static stability test	Pg. 306
12.8 The longitudinal dynamic stability	Pg. 307
12.9 The dynamic longitudinal stability test	Pg. 307
12.10 Yawed stabilized flight	Pg. 308
12.11 Transverse dynamic stability	Pg. 308
12.12 Spiral stability	Pg. 309
12.13 Directional stability	Pg. 310
12.14 Take off and landing with cross-wind	Pg. 310
12.15 Reactions to the trim change	Pg. 310
12.16 Stall behaviour	Pg. 311
12.17 Landing into wind or with tail wind	Pg. 312
12.18 The test method	Pg. 312
12.19 Approach and landing	Pg. 314
12.20 Handling qualities	Pg. 314
12.201 Longitudinal trim, stability and control	Pg. 314
12.202 Lateral and directional trim, stability and control	Pg. 314
12.203 Sideslip behaviour	Pg. 315
12.204 Stall characteristics at slow speed	Pg. 315
12.21 Behaviour at the max allowed speed	Pg. 316
12.22 Spin characteristics	Pg. 316
12.23 The spin test procedure	Pg. 317
Appendix to Chapter 12	Pg. 319
Bibliography	Pg. 320
Figures and graphs	Pg. 320-324

Chapter 13 – The glider type certification	Pg. 325
13.1 Introduction	Pg. 327
13.2 The certification request	Pg. 329
13.3 The technical documents	Pg. 329
13.4 A preliminary list of cases of load	Pg. 332
13.5 The tests	Pg. 332
13.6 The manuals	Pg. 333
13.7 The glider industrialization	Pg. 333

Appendixes	Pg. 337
A -- Instruments	Pg. 339
A.1 Basic principles	Pg. 339
A.2 Instruments dimensions and weight	Pg. 339
B --The flight manual	Pg. 343
C --The maintenance and repair manual	Pg. 343
D --Winglets	Pg. 346
Calculation Examples	Pg. 365
1 -- The glider polars	Pg. 367
2 -- The glider aerodynamic polar deducted from flight tests	Pg. 369
3 - Mean aerodynamic and geometric chord	Pg. 381
4 -- C.G. calculation and moments of inertia	Pg. 384
5 -- Static stability	Pg. 389
6 -- Manoeuvre behaviour.Forces per “g”	Pg. 392
7 -- Elevator required for landing	Pg. 394
8 -- The directional stability – rudder fixed	Pg. 395
9 -- Forces on the stick,elevator,rudder	Pg. 396
10 – The elevator hinge moment	Pg. 398
11 – Aileron dynamic equilibrium	Pg. 403
12 – The aileron efficiency	Pg. 409
13 – The glider airbrake loads	Pg. 412
14 -- Landing loads	Pg. 413
15 -- The landing gear	Pg. 415
16 – Manoeuvre envelope	Pg. 421
17 – Gust envelope – BCAR – E rules	Pg. 424
18 – Wing loads	Pg. 426
19 – Torsional moments on the wing	Pg. 430
20 – Fuselage loads	Pg. 432
21 – Tail loads – BCAR – E	Pg. 436
22 – Tail loads – CS 22	Pg. 440
23 – Fittings loads	Pg. 443
24 – The cockpit and the impact test	Pg. 446
Conclusion	Pg. 455
